AD490 Capstone -Transmission Drawings Interface

Eric Knigge, Zaya Erdenebileg, Lukas Knezevich

Agenda

Project Description

Development Process

Key Decisions

Key Updates

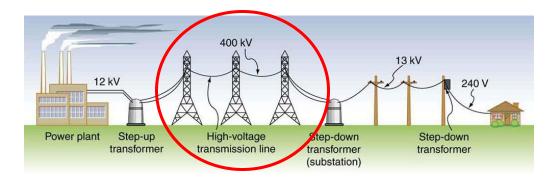

Next Steps

Demo

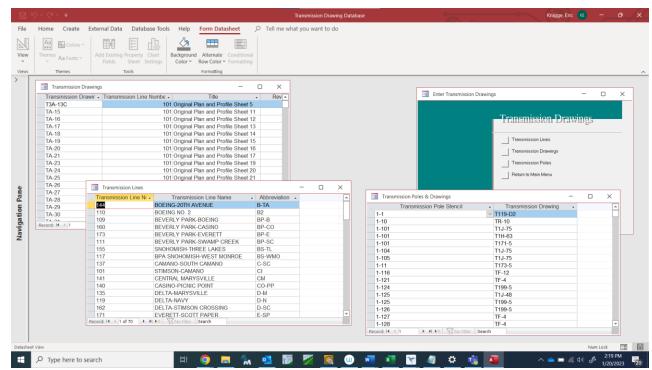

Project Description - Background

- Utilities keep records for their larger power structures, known as transmission lines.
- Transmission structures are like the highways for electricity.
 - They are higher voltage and transmit electricity between substations and power generation facilities.
 - Are often the large metal lattice structures you see, but can take other forms too
- We received an engineering drawing database from a local utility, as well as information about how this data is accessed

Project Description – Existing Conditions

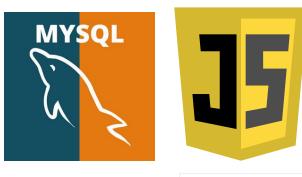

- Microsoft Access is used to open databases and run queries
- Service not wellutilized due being slow and nonintuitive
- Access forms limits features and extensibility

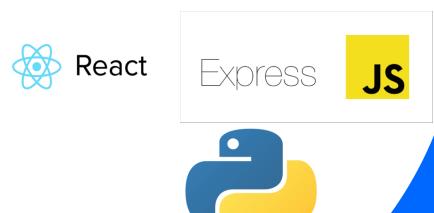

Project Description - New System

- Create web-based interface that functions similarly to a search engine, does <u>not</u> require client software installation
- Utilize open-source technologies to keep operational costs to a minimum
- Provide a fast and intuitive interface for searching for information
- Create an administrative interface for making updates to the system and database

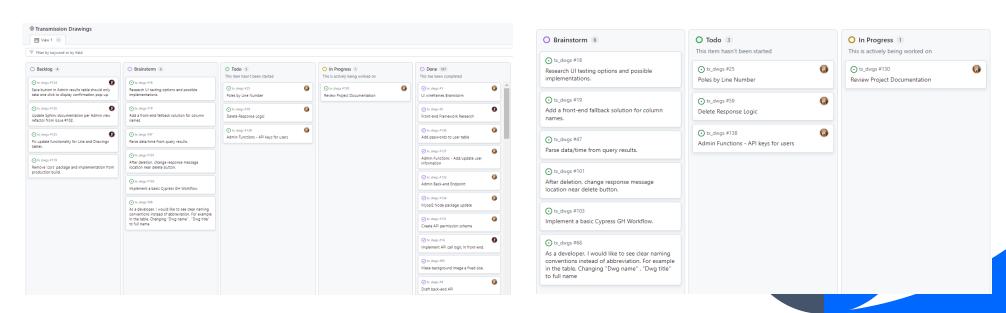

Development – Key Decisions

- Simplify technology by using JavaScript as the primary programming language for front-end and back-end tasks, Python for data manipulation and testing, and MySQL for the database
- The scope of the project was limited administration tasks were deferred. This allowed us to focus on core functionality and complete the project before the end of the quarter.
- Team members focused on specific areas: one person on backend, another on front-end, and the other on UI and data graphics.
- Everyone was responsible for maintaining their own documentation, but it was reviewed by others.

Development – Project Management

- Assign roles to the project team.
- Create a repository and brainstorm initial project tasks.
- Set a timeline and goals, working backwards from completion to project initiation.
- Make decisions on system architecture.

Development – My Tasks

- Project manager: ran meetings, assigned tasks, tracked progress, took notes, and adjusted work and scope to meet project goals
- Data wrangling: wrote scripts to manipulate data from exported tables
- Back-end: was responsible for building and updating database, importing project data, and making updates to administration tables. Also built middleware (Express.js) to service API
- Documentation: created Sphinx documentation for API and project

Development - Recent/Key Updates

- Ability to store and access user passwords from the API was added. Passwords were stored using salt and secure hash.
- Administration API functionality was added:
 - password reset,
 - Add new users
 - Revise implementation of user removal
- Project documentation was revised and updated

Development - Next Steps

- Update the UI to add administration to the UI
- Add additional administration features such as being able to update user information, display users, and review system logs
- Make UI improvements based on user feedback current implementation only received limited user testing

	Task Name	Duration	Start	Finish	1 Apr 9, '01			'01		Apr 16, '0'	Apr 23, '01				Apr 30, 101				May 7, '01			May		
_	TOTAL CONTROL OF THE PARTY OF T	TOWNSON TO SERVICE STATE OF THE PARTY OF THE	1000000	10.0000000	F	9				M W I		S	I	T	S	M	W	F	2	S 1	T	T	SI	М
	Design Server database structure	2 days	Sat 4/7/01	Sun 4/8/01		J.	rta I	ripati	188															
	Implement Database Module	6 days	Mon 4/9/01	Sat 4/14/01					լն	ita Tripat														
3	Implement Database Utility Module	4 days	Sun 4/15/01	VVed 4/18/01						Git	100	1	athi											
1	Implement SuperUserManager Module	2 days	Thu 4/19/01	Fri 4/20/01								1	Tripa	thi										
5	Implement I/O modules	7 days	Sun 4/8/01	Sat 4/14/01	8				կ\$	hengdon	g ZI	hac)											
3	Research RMILite and Ninja	4 days	Sun 4/15/01	VVcd 4/18/01						Sh	eng	gdo	ng 2	(had	•									
	Design Palm database structure	10 days	Thu 4/19/01	Sat 4/28/01					ı							She	ngo	ion	g Zł	iao				
3	Implement Meeting Module	2 days	Mon 4/9/01	Tue 4/10/01			J	ohn F	an															
3	Implement Meeting Manager Module	2 days	VVed 4/11/01	Thu 4/12/01				Jol	hŋ	Fan														
0	Implement Open Meeting Monitor module	3 days	Fri 4/13/01	Sun 4/15/01	1					John Far	1													
1	Implement Schedule Module	3 days	VVed 4/18/01	Fri 4/20/01						*	Jo	hn	Fan											
2	Implement Composite Schedule Module	4 days	Sat 4/21/01	Tue 4/24/01							-	-		ohr	Far	1								
3	Implement Authentication Manager Module	1 day	Thu 4/26/01	Thu 4/26/01					i			l		١.	John	Fa	n
